Executive Summary

On behalf of UniFirst Corporation (UniFirst) of Wilmington, Massachusetts, GEI Consultants, Inc. (GEI) prepared this Class B-1 Response Action Outcome Partial (RAO-P) Statement for 10 Franklin Avenue, Somerville, Massachusetts (the Property), which is a portion of the 50 Tufts Street site (the Site; Fig. 1). The Site is identified by Massachusetts Department of Environmental Protection (MassDEP) Release Tracking Number (RTN) 3-23246. A Site Map that shows the Property in relation to the Site boundary is presented in Fig. 2. This document provides closure for a portion of the Site under the Massachusetts Contingency Plan (MCP; 310 CMR 40.0000) and indicates that a condition of No Significant Risk (NSR) exists at the Property.

A release of chlorinated volatile organic compounds (VOCs) to soil and groundwater at the Site was first reported to the MassDEP in 2002. Subsequent investigations at the Site identified chlorinated VOCs in indoor air at 50 Tufts Street, and in groundwater and indoor air at residential and commercial properties in the vicinity of 50 Tufts Street.

Based on an extrapolation of the concentration of chlorinated VOCs in shallow groundwater monitoring wells, and the shallow groundwater concentrations exhibited in the monitoring well located approximately 30 feet from the Property, the concentration of PCE in shallow groundwater at the Property is estimated to be less than the laboratory reporting limit of 1 microgram per liter ($\mu\text{g/l}$). The Property is located within the Site solely due to its location over low concentrations of groundwater contamination in the deep overburden and bedrock.

Based on the following lines of evidence, GEI concludes that the vapor intrusion pathway is incomplete at the Property:

- Residual or connected phase dense non-aqueous phase liquid (DNAPL) has not been detected at or near the Property.
- Chlorinated VOCs have not been detected in soil above laboratory reporting limits near the Property.
- Chlorinated VOCs have not been detected in shallow groundwater samples collected near the property (MW121S) above the laboratory reporting limit.
- Chlorinated VOCs measured in the soil vapor at MW121S were less than 10 micrograms per cubic meter ($\mu\text{g/m}^3$). Ten $\mu\text{g/m}^3$ is a conservative screening value that MassDEP provided and approved for use at this Site in the Immediate Response Action (IRA) Plan Modification Conditional Approval letter, dated June 19, 2007. Detections of VOCs at concentrations below the threshold screening value of

10 $\mu\text{g}/\text{m}^3$ indicate that there is not a complete vapor intrusion pathway at the Property, and no additional action is required to address that pathway.

- Chlorinated VOCs have not been detected above laboratory reporting limits in indoor air samples collected from nearby buildings.

A Class B-1 RAO-P Statement is appropriate for the Property based on the following:

- Remedial actions were not conducted and a Permanent Solution has been achieved.
- A condition of NSR to human health, safety, public welfare, and the environment exists for all receptors.
- An Activity and Use Limitation (AUL) is not required to maintain a condition of NSR.
- Oil or hazardous material (OHM) at the Property does not exceed an applicable Upper Concentration Limit (UCL) in soil or groundwater.

1. Introduction

On behalf of UniFirst Corporation (UniFirst) of Wilmington, Massachusetts, GEI Consultants, Inc. (GEI) of Woburn, Massachusetts prepared this Class B-1 Response Action Outcome Partial (RAO-P) Statement for 10 Franklin Avenue, Somerville, Massachusetts (the Property), which is a portion of the 50 Tufts Street site (the Site; Fig. 1). The Site includes 50 Tufts Street, surrounding residential and commercial properties to the east and immediately west of 50 Tufts Street, and the Michael E. Capuano Early Childhood Center (Capuano Center). A Site Map that shows the Property in relation to the Site boundary is presented in Fig. 2. Chlorinated volatile organic compounds (VOCs), particularly tetrachloroethylene (also called perchloroethylene [PCE]), have been detected in soil, groundwater (shallow and deep overburden, and bedrock), soil vapor, and indoor air at portions of the Site.

This document provides closure for a portion of the Site under the Massachusetts Contingency Plan (MCP; 310 CMR 40.0000), and indicates that a condition of No Significant Risk (NSR) exists at the Property.

The Site is identified by Massachusetts Department of Environmental Protection (MassDEP) Release Tracking Number (RTN) 3-23246. The Immediate Response Action (IRA) Plan associated with RTN 3-23246 was submitted to MassDEP on January 9, 2006. The Site is currently classified Tier IC (Permit No. W085813). The “Phase II Comprehensive Site Assessment (CSA), Method 3 Risk Characterization, and Phase III Remedial Action Plan (RAP)” (Phase II/III) for the Site was submitted to MassDEP on July 14, 2008. The “Phase IV Remedy Implementation Plan (RIP)” (Phase IV) was submitted to MassDEP on August 10, 2009, and the IRA Completion Report and Remedial Monitoring Report (RMR) No. 11 (IRAC Report) was submitted to MassDEP on November 13, 2009.

1.1 Purpose

The purpose of this Class B-1 RAO-P Statement, in accordance with the requirements of the MCP, is to document that a Permanent Solution has been achieved.

1.2 Scope

The scope of this Class B-1 RAO-P Statement for the Property is to:

- Provide a summary of the environmental conditions.

- Evaluate the risk to human health, safety, public welfare, and the environment at the Property.
- Demonstrate that the applicable requirements for a Class B-1 RAO-P have been achieved.

1.3 Submittals

The original MassDEP transmittal form (BWSC-104) was submitted online via eDEP and a copy is included in Appendix A. As required by the MCP (310 CMR 40.1403(3)(f)), GEI submitted letters to the Somerville Chief Municipal Officer and the Board of Health notifying them of the availability of this Class B-1 RAO-P Statement. Copies of the notification letters are in Appendix B.

1.4 Public Record

Documents related to the environmental investigations conducted at the Site are on file with the MassDEP Northeast Regional Office located at 205B Lowell Street in Wilmington, Massachusetts. Additionally, local public document repositories have been established at the Somerville Central Public Library and at the City of Somerville Clerk's Office. GEI also provides electronic versions of the repository documents to the City for posting to its web site.

1.6 Conceptual Site Model

GEI developed this Conceptual Site Model (CSM) to describe release mechanisms, contaminant distribution, and potential exposure pathways associated with the Property. The CSM is based upon the investigation data documented in the Phase II/III and IRAC Report. Site features associated with the CSM are shown in Fig. 2.

1.6.1 Property Location and Description

The Property is located within the Site boundary associated with a release of chlorinated VOCs to soil and groundwater at 50 Tufts Street, located approximately 900 feet (ft) west of the Property. The Property is located in a commercial/residential zoning district, fronts Franklin Avenue to the east, is bounded by residential property to the north and south, and is bounded by commercial property to the west. The Property is occupied by a single-family residential building.

1.6.2 Contaminant Distribution

From approximately 1955 to approximately 2002, 50 Tufts Street was used for storage and distribution of industrial chemicals, laundry supplies, and dry cleaning supplies. Chemicals stored at and delivered to and from 50 Tufts Street included chlorinated solvents. These chlorinated VOCs – particularly PCE, trichloroethylene (TCE), and 1,1,1-trichloroethane (TCA) – have been detected in soil, soil vapor, indoor air, and groundwater at 50 Tufts Street. A release of chlorinated VOCs to soil and groundwater at the Site was first reported to MassDEP in 2002.

Chlorinated VOCs generally have not been detected in soils beyond the boundaries of 50 Tufts Street. Chlorinated VOCs have been detected at the Site in the shallow and deep overburden and bedrock groundwater. Based on an extrapolation of the concentration of chlorinated VOCs in shallow groundwater monitoring wells, and the shallow groundwater concentrations exhibited in the monitoring well located approximately 30 ft from the Property (MW121S), the concentration of PCE in shallow groundwater at the Property is estimated to be less than the laboratory reporting limit of 1 microgram per liter ($\mu\text{g/l}$).

The eastern boundary of the Site is based on the lateral extent of the deep overburden and bedrock groundwater plumes, where very low concentrations of PCE have been detected in groundwater collected from wells in till and bedrock (Fig. 2). The Property is located within the Site solely due to its location over low concentrations of groundwater contamination in the deep overburden and bedrock.

2. Property Investigations

Since March 2006, GEI has conducted subsurface investigations that included collecting soil, groundwater, soil vapor, and indoor air samples across the Site for laboratory testing. The investigations that are representative of conditions at the Property are summarized below. The laboratory reports associated with the majority of these investigations have been submitted to MassDEP under previous submittals, and are not re-presented in this report.

2.1 Groundwater Sampling

There is no groundwater monitoring well located at the Property. However, the concentrations of chlorinated VOCs detected in groundwater samples collected from monitoring wells MW121S and MW121D, located approximately 30 ft north of the Property on Franklin Avenue, are considered to be representative of groundwater conditions at the Property.

Ten groundwater samples have been collected from MW121S and MW121D between October 2007 and April 2010. The groundwater samples were submitted to Accutest Laboratories (Accutest) of Marlborough, Massachusetts for analysis of VOCs by U.S. Environmental Protection Agency (EPA) Method 8260B. Chlorinated VOCs were not detected above laboratory reporting limits in groundwater samples collected from monitoring well MW121S. Monitoring well MW121S is a shallow well screened between 5 and 20 ft below ground surface (ft bgs).

Monitoring well MW121D is a bedrock well screened between 32 and 47 ft bgs. The following compounds were detected above laboratory reporting limits in at least one groundwater sample collected from MW121D: 1,1-dichloroethane (DCA), 1,1-dichloroethylene (DCE), cis-1,2-DCE, methyl tert-butyl ether (MTBE), PCE, trans-1,2-DCE, toluene, TCA, TCE, and vinyl chloride. MTBE and toluene are not related to the Site. The laboratory testing results for groundwater samples collected from MW121S and MW121D are summarized in Table 1.

2.2 Soil Sampling

Prior to the installation of monitoring wells MW121S and MW121D, a shallow soil sample (SB121A) was collected from 0 to 3 ft bgs during the attempted installation of a groundwater monitoring well located approximately 145 ft north of the Property (Fig. 2). Due to subsurface conditions, the well installation was not completed. GEI submitted this sample to

Accutest for VOC analysis by EPA Method 8260B. Chlorinated VOCs were not detected above laboratory reporting limits in this sample.

Soil samples MW121D-VAC 1 (1 to 3 ft), MW121D-VAC 2 (3 to 5 ft), and MW121D-S3 (10 to 12 ft) were collected during the installation of groundwater monitoring well MW121D and submitted to Accutest for VOC analysis by EPA Method 8260B. Chlorinated VOCs also were not detected above laboratory reporting limits in these three soil samples. The laboratory testing results for these soil samples are summarized in Table 2.

2.3 Soil Vapor Sampling

A soil vapor monitoring port was installed in MW121S, and soil vapor samples were collected on October 22, 2007 and January 8, 2008. GEI submitted the samples to Accutest for VOC analysis by EPA Method TO-15 for the following analytes:

- | | |
|--|-------------------------------|
| ▪ Chloroethane | ▪ 1,1,1-Trichloroethane (TCA) |
| ▪ Carbon Tetrachloride | ▪ 1,1,2,2-Tetrachloroethane |
| ▪ 1,1-Dichloroethane (1,1-DCA) | ▪ 1,1,2-Trichloroethane |
| ▪ 1,1-Dichloroethylene (1,1-DCE) | ▪ Tetrachloroethylene (PCE) |
| ▪ 1,2-Dichloroethane (1,2-DCA) | ▪ Trichloroethylene (TCE) |
| ▪ trans-1,2-Dichloroethylene (trans-1,2-DCE) | ▪ Vinyl Chloride |
| ▪ cis-1,2-Dichloroethylene (cis-1,2-DCE) | |

The VOCs 1,1-DCA, PCE, and vinyl chloride each were detected at concentrations slightly above laboratory reporting limits (0.81 microgram per cubic meter ($\mu\text{g}/\text{m}^3$), $1.4 \mu\text{g}/\text{m}^3$, and $0.51 \mu\text{g}/\text{m}^3$, respectively) in at least one soil vapor sample from MW121S. The laboratory testing results are summarized in Table 3.

3. Evaluation of Vapor Intrusion Pathway

All pertinent data were reviewed and considered to evaluate the potential for a complete vapor intrusion pathway on the Property. Based on the following lines of evidence, there is no such complete vapor intrusion pathway:

- Residual or connected phase dense non-aqueous phase liquid (DNAPL) has not been detected at or near the Property.
- Chlorinated VOCs have not been detected in soil above laboratory reporting limits near the Property.
- Chlorinated VOCs have not been detected in shallow groundwater samples collected near the property (MW121S) above the laboratory reporting limit.
- Chlorinated VOCs measured in the soil vapor at MW121S were less than $10 \mu\text{g}/\text{m}^3$. Ten $\mu\text{g}/\text{m}^3$ is a conservative screening value that MassDEP provided and approved for use at this Site in the IRA Plan Modification Conditional Approval letter, dated June 19, 2007. Detections of VOCs at concentrations below the threshold screening value of $10 \mu\text{g}/\text{m}^3$ indicate that there is not a complete vapor intrusion pathway, at the Property, and no additional action is required to address that pathway.
- Chlorinated VOCs have not been detected above laboratory reporting limits in indoor air samples collected from nearby buildings.

4. Method 1 Risk Characterization

Three Site-wide Method 3 Risk Characterization Reports were previously prepared for the Site. The July 2008 Phase II/Phase III included a Method 3 Risk Characterization for the Site, prepared by AMEC Earth & Environmental (AMEC) of Westford, Massachusetts. In response to MassDEP comments, AMEC prepared a Supplemental Method 3 Risk Characterization (Supplemental Risk Characterization) in May 2009. The Supplemental Risk Characterization evaluated potential risks using the framework in the July 2008 Method 3 Risk Characterization, including an indoor air Exposure Assessment for each affected residence without an effective Exposure Pathway Elimination Measure (EPEM). A Revised Supplemental Risk Characterization was prepared to support the IRAC Report. Potential risks presented in the Supplemental Risk Characterization were updated in the Revised Supplemental Risk Characterization to reflect additional data collection and additional EPEMs installed by GEI.

Based on all lines of evidence, there is not a complete vapor intrusion pathway at the Property. Accordingly, a Method 1 Risk Characterization was completed for the Property (10 Franklin Avenue Risk Characterization) in accordance with 310 CMR 40.0900 to support this RAO-P. A Method 1 Risk Characterization evaluates foreseeable Site uses, potential receptors, compounds of potential concern (COPCs), and exposure point concentrations (EPCs), and compares EPCs detected in soil and groundwater to MassDEP-derived standards. If the EPCs in soil and groundwater are less than the applicable Method 1 standards then a condition of NSR of harm to human health, public welfare, and the environment exists. In accordance with 310 CMR 40.0971(5), a separate characterization of the risk of harm to safety was also conducted.

A Method 1 Risk Characterization was appropriate for the Property because; 1) COPCs are not detected in media other than groundwater, 2) MCP standards exist for the COPCs detected at the Property, and 3) compounds considered by the MassDEP to bioaccumulate are not present within 2 ft of the ground surface.

4.1 Current and Reasonably Foreseeable Site Activity and Use

Consistent with the requirements of the MCP (310 CMR 40.0923), the 10 Franklin Avenue Risk Characterization considered both current and future uses of the Property. The current use of the Property is as a residence, and the reasonably conservative foreseeable use of the Property is also residential.

4.2 Potential Human Receptors

Potential human receptors were identified based on current and foreseeable uses of the Property. Current use receptors at the Property are residents. Future use receptors of the Property are future residents and construction workers during potential future excavation/development activities.

4.3 Potential Environmental Receptors

The Property is in an urban area, is fully developed, and would not likely represent a potentially significant terrestrial habitat. Based on the low levels of COPCs in accessible surface soils and the scarcity of open land, the Property does not provide for exposures for potential terrestrial receptors.

The closest surface water bodies are the Mystic River, located approximately 1 mile northeast of the Property, and the Charles River, located approximately 1.7 miles south-southeast of the Property. Based on the distance to the nearest aquatic receptors and the current levels of COPCs in groundwater, the transport of COPCs in groundwater to surface water and sediment is not considered to be a significant exposure pathway.

4.4 Summary of Analytical Results

The environmental conditions at the Property have been characterized based on data collected in the immediate vicinity of the Property, as described in Section 2.

4.4.1 Soil

Because chlorinated VOCs generally have not been detected in soils beyond the boundaries of the 50 Tufts Street property, soil samples were not collected at the Property. Chlorinated VOCs were not detected above laboratory reporting limits in the three soil samples collected during the installation of MW121D, located approximately 30 ft north of the Property. In addition chlorinated VOCs were not detected above laboratory reporting limits in the soil sample SB121A, collected during the attempted installation of a well, located approximately 145 ft north of the Property. Consequently, soil at the Property is not considered to be impacted by Site COPCs, and is not evaluated further in this risk characterization.

4.4.2 Groundwater

We reviewed and evaluated groundwater data for use in the Method 1 Risk Characterization to identify potential exposure points and derive EPCs based on the relevant groundwater categories identified for the Property. Groundwater data included in the Method 1 Risk

Characterization are from the two monitoring wells located approximately 30 ft north of the Property, MW121S and MW121D, and are presented in Table 2.

4.4.3 Hot Spot Evaluation

Under the MCP (310 CMR 40.0924), hot spots must be considered as distinct exposure points. A hot spot is defined as a discrete area where the concentrations of oil or hazardous material (OHM) are substantially higher than those concentrations in the surrounding area. No "hot spots" have been identified at the Property.

4.5 COPCs

The following compounds were detected in at least one groundwater sample collected from deep groundwater monitoring well MW121D: PCE; 1,1-DCA; 1,1-DCE; cis-1,2-DCE; TCA; and TCE. COPCs were not detected in samples collected from shallow groundwater monitoring well MW121S.

The COPCs at the Site have been limited to certain chlorinated solvents, together with their associated breakdown products. Naphthalene, MTBE, and toluene have historically been detected at higher concentrations in monitoring wells located several hundred feet away from the 50 Tufts Street property (MW106, and MW107, and MW121S/D) than the maximum concentration detected in samples collected from the 50 Tufts Street property. These compounds are not considered to be associated with the releases of OHM at 50 Tufts Street; therefore, they are not COPCs at the Site and are not evaluated further in this risk characterization for the Property.

4.6 Soil and Groundwater Categories

This section identifies and documents the applicable soil and groundwater categories, as described in the MCP (310 CMR 40.0930). The soil and groundwater categories are considered general indicators of the potential for exposure to OHM.

4.6.1 Soil Categories

Under the MCP, soil can be classified into one of three categories (S-1, S-2, or S-3). Category S-1 soil represents the highest potential exposure because it assumes unrestricted use of the soil (i.e., residential), whereas category S-3 soil represents the lowest potential for exposure. Residents currently present at the Property are considered to have high frequency and high intensity contact with soil located outside of the building footprint. Soil beneath the building is considered to be isolated. Therefore, soil located from 0 to 15 ft bgs outside the

building footprint is categorized as S-1, and soil located beyond 15 ft deep or beneath the building footprint is categorized as S-3.

For purposes of this risk characterization, however, all soil from 0 to 15 ft bgs at the Property was compared to S-1 standards to evaluate risk under current and potential future residential uses.

4.6.2 Groundwater Categories

The MCP identifies three groundwater categories which correspond to the following three distinct types of exposures:

- **Groundwater Category GW-1** applies to groundwater assumed to be a current or future source of drinking water.
- **Groundwater Category GW-2** applies to groundwater considered to be a potential source of vapors that could migrate through the soil and concentrate in indoor air of existing, occupied buildings. GW-2 is defined as groundwater located within 30 ft of an existing or planned building or structure that is or will be occupied, and the average annual depth to groundwater in that area is 15 ft or less.
- **Groundwater Category GW-3** applies to groundwater that is assumed to discharge to surface water. All groundwater in the Commonwealth is classified as GW-3.

Because the exposures are not necessarily related to each other, they are not mutually exclusive. Therefore, more than one category may be applicable to a site and/or different areas of a site.

Groundwater beneath the Property is not located within a current or potential drinking water source area. There is an occupied building at the Property, and the depth to groundwater is less than 15 ft bgs. Based on this information, the applicable groundwater categories for the Property are GW-2 and GW-3.

4.7 Identification of EPCs

The MCP requires that the estimation of EPCs be representative of actual and foreseeable exposures.

4.7.1 Groundwater EPCs

For a Method 1 Risk Characterization, and in accordance with 310 CMR 40.0924, “the groundwater EPC shall be the groundwater resource itself, as measured at each wellhead...” Therefore, the maximum groundwater concentrations for each COPC in each monitoring well

were identified as EPCs (Table 4). The location of groundwater monitoring wells MW121S and MW121D are shown in Fig. 2.

4.8 Comparison of EPCs to MCP Standards

A condition of NSR of harm to health, public welfare, and the environment exists if the EPCs are less than the lowest applicable MCP soil or groundwater standard.

For groundwater, the EPCs were identified and compared to applicable Method 1 GW-2 and GW-3 groundwater standards (Table 4). Based on the depth from which the groundwater samples were collected from each monitoring well (MW121D = 32 to 47 ft bgs and MW121S = 5 to 20 ft bgs), the applicable Method 1 standards for comparison to MW121D are the GW-3 standards, and the applicable Method 1 standards for comparison to MW121S are the GW-2 and GW-3 standards. The results of this comparison show that the groundwater EPCs for all COPCs are below the applicable Method 1 standards. Therefore, a condition of NSR of harm to health, public welfare and the environment exists at the Property.

4.9 Characterization of Risk of Harm to Safety

In accordance with the MCP (310 CMR 40.0971(5)), a separate characterization of risk of harm to safety was also conducted in accordance with 310 CMR 40.0960. There are no rusted or corroded drums or containers, open pits, lagoons, or other dangerous structures at the Property; there is no threat of fire or explosion at the Property; and there are no uncontained materials which exhibit the characteristics of corrosivity, reactivity, or flammability at the Property. Therefore, a condition of NSR of harm to safety exists at the Property.

4.10 Conclusions

The Method 1 Risk Characterization for the Property concluded:

- A condition of NSR to health, safety, public welfare, and the environment exists for all receptors.
- No remedial actions are required.
- An AUL is not required to maintain a condition of NSR.

Therefore, no further action is required at the Property.

5. Representativeness Evaluation and Data Usability Assessment

The purpose of a Representativeness Evaluation and Data Usability Assessment (REDUA) is to evaluate the extent to which a data set meets specific site characterization and data usability objectives. The majority of the data on which this Class B-1 RAO-P Statement relies was evaluated under the REDUA presented in the Phase II/III, which was submitted in July 2008. However, additional groundwater samples have been collected since the Phase II/III, and the analytical results for some of those samples are included in the data set for this RAO-P Statement. A REDUA for these additional data are presented below. We performed the REDUA in general accordance with MassDEP Policy #WSC-07-350, "MCP Representativeness Evaluations and Data Usability Assessments," dated September 19, 2007.

5.1 Conceptual Site Model

The CSM is presented in Section 1.6.

5.2 Field and Screening Data

Field data include physical parameter measurements we made during groundwater sampling (e.g., pH, temperature, conductivity, dissolved oxygen, etc.). We reviewed field and screening data with the associated laboratory testing reports as part of the data quality assessment.

5.3 Sampling Rationale, Distribution, and Data Completeness

Environmental samples were submitted for chlorinated VOC testing consistent with the Site history and types of chemicals stored and used at the Site. To characterize the groundwater at the Property, GEI relied on groundwater monitoring wells MW121S and MW121D. Since the Phase II/III, six additional groundwater samples have been collected from these monitoring wells.

No data associated with conditions at the Property were rejected for quality assurance/quality control reasons. We did not identify data gaps related to sample distribution or data quality. Therefore, the data set is considered 100% complete. We did not identify inconsistent data. Field screening results, and observations such as visual and olfactory observations, were consistent with laboratory testing results. There is little uncertainty associated with the data used to support this Class B-1 RAO-P Statement given the number of samples collected and the locations at which they were collected. All data collected were considered representative.

5.4 Data Usability Assessment

Laboratory testing data used to support this Class B-1 RAO-P Statement were generated pursuant to the MassDEP Compendium of Analytical Methods (CAM) and 310 CMR 40.1056 and meet the criteria for “Presumptive Certainty” as identified in the MassDEP document “WSC No. 02-320: Compendium of Quality Assurance and Quality Control Requirements and Performance Standards for Selected Analytical Methods,” dated May 28, 2004. These data also are consistent with our field observations, are representative of conditions that exist or existed at the Property, and are of a level of precision and accuracy commensurate with the preparation of this Class B-1 RAO-P Statement.

5.5 Data Usability Criteria

We evaluated data for the Precision Accuracy Representativeness Completeness Comparability and Sensitivity (PARCCS) parameters as part of our field procedures, our laboratories’ analytical protocols, and our in-house data review and validation process. No data were qualified. Laboratory reporting limits for COPCs considered in the risk characterization were of appropriate precision.

5.6 Statement of Suitability

In summary, the data set relied upon in this Class B-1 RAO-P Statement to characterize the conditions at the Property and perform a risk characterization is scientifically valid and defensible. It is of sufficient accuracy, precision, and completeness. In addition, the data set is representative of the spatial and temporal distribution of sampling points.

6. Class B-1 Response Action Outcome Partial Statement

Based on the results of the Phase II/III prepared for the Site, and the 10 Franklin Avenue Risk Characterization, it is the LSP's opinion that a Class B-1 RAO-P Statement is appropriate for the Property because:

- Remedial actions were not conducted and a Permanent Solution has been achieved.
- A condition of NSR to human health, safety, public welfare, and the environment exists for all receptors.
- An AUL is not required to maintain a condition of NSR.
- OHM at the Property do not exceed applicable UCLs in soil or groundwater.

This Class B-1 RAO-P is a partial RAO because it only applies to the lateral limits of the Property shown on Fig. 2.

6.1 Operation, Maintenance, and/or Monitoring

There is no operation, maintenance, and/or monitoring required at the Property.

7. Limitations

The conclusions provided by GEI in this report are based solely on the information reported in this document. Additional information which was not available to GEI may result in a modification of the conclusions stated above. This report has been prepared in accordance with generally accepted hydrogeological practices. In the event that a MassDEP audit is conducted, it is the responsibility of UniFirst Corporation, and not GEI, to respond to the MassDEP Notice of Audit Findings. No warranty, expressed or implied, is made.

- General Notes:**
- Analytes detected in at least one sample are reported here. For a complete list of analytes refer to the laboratory data reports.
 - ft bgs = feet below ground surface.
 - µg/l = micrograms per liter.
 - "<" = The analyte was not detected at a concentration above the specified reporting limit.
 - MTBE, naphthalene, and toluene are not associated with the release of chlorinated VOCs at the Site; and are therefore not compounds of potential concern (COPCs). Refer to Section 4.5 of this RAO report.

- Qualifying Note:**
- J The reported result is below the laboratory reporting limit and is estimated.

Vinyl chloride		1.8	0.72	< 0.51	< 0.20
Total VOCs		5.9	1.54	1.8	0.26

General Notes:

1. Analytes detected in at least one sample are reported here. For a complete list of analytes see the attached laboratory data sheets.
2. µg/m³ = micrograms per cubic meter.
3. ppbv = parts per billion by volume.
4. "<" = The analyte was not detected at a concentration above the specified laboratory reporting limit.

Qualifying Note:

J The reported result is below the laboratory reporting limit and is estimated.

Table 4
Exposure Point Concentrations - Groundwater
 10 Franklin Avenue
 Somerville, Massachusetts

Sample Location:				MW121S	MW121D	
Analyte	Method	Units	Method 1 Standards		Exposure Point Concentrations ³	Exposure Point Concentrations ³
			GW-2	GW-3		
Volatile Organic Compounds (VOCs)						
Dichloroethane, 1,1-	8260B	µg/l	1000	20,000	< 0.23	55
Dichloroethylene, cis-1,2-			100	50,000	< 0.43	279
Dichloroethylene, 1,1-			80	30,000	< 0.52	22
Tetrachloroethylene (PCE)			50	30,000	< 0.52	258
Trans-1,2-Dichloroethylene			90	50,000	< 0.47	1.10
Trichloroethane, 1,1,1- (TCA)			4000	20,000	< 0.49	4.9
Trichloroethylene (TCE)			30	5,000	< 0.38	146
Vinyl chloride			2	50,000	< 0.31	0.56

General Notes:

1. µg/l = micrograms per liter.
2. "<" = The analyte was not detected at a concentration above the specified reporting limit.
3. The exposure point concentrations are based on the maximum concentrations within each monitoring well.
4. Based on the depth from which the groundwater samples were collected from each monitoring well, the applicable Method 1 Standard for comparison to MW121S are the GW-2 and GW-3 standards, and the applicable Method 1 standards for comparison to MW121D are the GW-3 standards.

MassDEP Form (BWSC-104) “Response Action Outcome
Transmittal Form”

Massachusetts Department of Environmental Protection
Bureau of Waste Site Cleanup

BWSC104

RESPONSE ACTION OUTCOME (RAO) STATEMENT

Pursuant to 310 CMR 40.1000 (Subpart J)

Release Tracking Number

3

-

23246

For sites with multiple RTNs, enter the Primary RTN above.

A. SITE LOCATION:

1. Site Name/Location Aid: 50 TUFTS ST & PROP ACROSS THE ST

2. Street Address: 50 TUFTS ST

3. City/Town: SOMERVILLE

4. ZIP Code: 021454129

☒ 5. Check here if a Tier Classification Submittal has been provided to DEP for this disposal site.

☐ a. Tier IA ☐ b. Tier IB ☒ c. Tier IC ☐ d. Tier II

6. If a Tier I Permit has been issued, provide Permit Number: W085813

B. THIS FORM IS BEING USED TO: (check all that apply)

1. List Submittal Date of RAO Statement (if previously submitted):

mm/dd/yyyy

☐ 2. Submit a **Response Action Outcome (RAO) Statement**

☐ a. Check here if this RAO Statement covers additional Release Tracking Numbers (RTNs). RTNs that have been previously linked to a Tier Classified Primary RTN do not need to be listed here.

b. Provide additional Release Tracking Number(s) covered by this RAO Statement.

☐

-

☐

-

☐ 3. Submit a **Revised Response Action Outcome Statement**

☐ a. Check here if this Revised RAO Statement covers additional Release Tracking Numbers (RTNs), not listed on the RAO Statement or previously submitted Revised RAO Statements. RTNs that have been previously linked to a Tier Classified Primary RTN do not need to be listed here.

b. Provide additional Release Tracking Number(s) covered by this RAO Statement.

☐

-

☐

-

☒ 4. Submit a **Response Action Outcome Partial (RAO-P) Statement**

Check above box, if any Response Actions remain to be taken to address conditions associated with this disposal site having the Primary RTN listed in the header section of this transmittal form. This RAO Statement will record only an RAO-Partial Statement for that RTN. A final RAO Statement will need to be submitted that references all RAO-Partial Statements and, if applicable, covers any remaining conditions not covered by the RAO-Partial Statements.

Also, specify if you are an Eligible Person or Tenant pursuant to M.G.L. c. 21E s.2, and have no further obligation to conduct response actions on the remaining portion(s) of the disposal site:

☐ a. Eligible Person ☐ b. Eligible Tenant

☐ 5. Submit an optional **Phase I Completion Statement** supporting an RAO Statement

☐ 6. Submit a **Periodic Review Opinion evaluating the status of a Temporary Solution** for a Class C-1 RAO Statement, as specified in 310 CMR 40.1051 (Section F is optional)

☐ 7. Submit a **Retraction** of a previously submitted **Response Action Outcome Statement** (Sections E & F are not required)

(All sections of this transmittal form must be filled out unless otherwise noted above)

Massachusetts Department of Environmental Protection
Bureau of Waste Site Cleanup

RESPONSE ACTION OUTCOME (RAO) STATEMENT

Pursuant to 310 CMR 40.1000 (Subpart J)

Release Tracking Number

3 - 23246

C. DESCRIPTION OF RESPONSE ACTIONS (cont.): (check all that apply; for volumes, list cumulative amounts)

☐ 18. Other Response Actions:

Describe:

☐ 19. Use of Innovative Technologies:

Describe:

D. SITE USE:

1. Are the response actions that are the subject of this submittal associated with the *redevelopment, reuse* or the *major expansion of the current use* of property(ies) impacted by the presence of oil and/or hazardous materials?

☐ a. Yes ☒ b. No ☐ c. Don't know

2. Is the property a *vacant or under-utilized commercial or industrial* property ("a brownfield property")?

☐ a. Yes ☒ b. No ☐ c. Don't know

3. Will funds from a state or federal brownfield incentive program be used on one or more of the property(ies) within the disposal site?

☐ a. Yes ☒ b. No ☐ c. Don't know If Yes, identify program(s):

4. Has a Covenant Not to Sue been obtained or sought?

☐ a. Yes ☒ b. No ☐ c. Don't know

5. Check all applicable categories that apply to the person making this submittal: ☐ a. Redevelopment Agency or Authority

☐ b. Community Development Corporation ☐ c. Economic Development and Industrial Corporation

☐ d. Private Developer ☐ e. Fiduciary ☐ f. Secured Lender ☐ g. Municipality

☐ h. Potential Buyer (non-owner) ☒ i. Other, describe: OTHER PRPS

This data will be used by MassDEP for information purposes only, and does not represent or create any legal commitment, obligation or liability on the part of the party or person providing this data to MassDEP.

E. RESPONSE ACTION OUTCOME CLASS:

Specify the Class of Response Action Outcome that applies to the disposal site, or site of the Threat of Release. Select **ONLY** one Class.

☐ 1. Class A-1 RAO: Specify one of the following:

☐ a. Contamination has been reduced to background levels. ☐ b. A Threat of Release has been eliminated.

☐ 2. Class A-2 RAO: You **MUST** provide justification that reducing contamination to or approaching background levels is infeasible.

☐ 3. Class A-3 RAO: You **MUST** provide an implemented Activity and Use Limitation (AUL) and justification that reducing contamination to or approaching background levels is infeasible.

☐ 4. Class A-4 RAO: You **MUST** provide an implemented AUL, justification that reducing contamination to or approaching background levels is infeasible, and justification that reducing contamination to less than Upper Concentration Limits (UCLs) 15 feet below ground surface or below an Engineered Barrier is infeasible. If the Permanent Solution relies upon an Engineered Barrier, you must provide or have previously provided a Phase III Remedial Action Plan that justifies the selection of the Engineered Barrier.

Release Tracking Number

3

-

23246

E. RESPONSE ACTION OUTCOME CLASS (cont.):

☒ 5. Class B-1 RAO: Specify one of the following:

- ☐ a. Contamination is consistent with background levels ☒ b. Contamination is **NOT** consistent with background levels.

☐ 6. Class B-2 RAO: You **MUST** provide an implemented AUL.

☐ 7. Class B-3 RAO: You **MUST** provide an implemented AUL and justification that reducing contamination to less than Upper Concentration Limits (UCLs) 15 feet below ground surface is infeasible.

☐ 8. Class C-1 RAO: You must submit a plan as specified at 310 CMR 40.0861(2)(h). Indicate type of ongoing response actions.

- ☐ a. Active Remedial System ☐ b. Active Remedial Monitoring Program ☐ c. None

- ☐ d. Other Specify:

☐ 9. Class C-2 RAO: You must hold a valid Tier I Permit or Tier II Classification to continue response actions toward a Permanent Solution.

F. RESPONSE ACTION OUTCOME INFORMATION:

1. Specify the Risk Characterization Method(s) used to achieve the RAO described above:

- ☒ a. Method 1 ☐ b. Method 2 ☐ c. Method 3
☐ d. Method Not Applicable-Contamination reduced to or consistent with background, or Threat of Release abated

2. Specify all Soil Category(ies) applicable. More than one Soil Category may apply at a Site. Be sure to check off all **APPLICABLE** categories:

- ☐ a. S-1/GW-1 ☐ d. S-2/GW-1 ☐ g. S-3/GW-1
☒ b. S-1/GW-2 ☐ e. S-2/GW-2 ☒ h. S-3/GW-2
☒ c. S-1/GW-3 ☐ f. S-2/GW-3 ☒ i. S-3/GW-3

3. Specify all Groundwater Category(ies) impacted. A site may impact more than one Groundwater Category. Be sure to check off all **IMPACTED** categories:

- ☐ a. GW-1 ☐ b. GW-2 ☒ c. GW-3 ☐ d. No Groundwater Impacted

4. Specify remediation conducted:

- ☐ a. Check here if soil remediation was conducted.
☐ b. Check here if groundwater remediation was conducted.

5. Specify whether the analytical data used to support the Response Action Outcome was generated pursuant to the Department's Compendium of Analytical Methods (CAM) and 310 CMR 40.1056:

- ☒ a. CAM used to support all analytical data. ☐ b. CAM used to support some of the analytical data.
☐ c. CAM not used.

☒ 6. Check here to certify that the Class A, B or C Response Action Outcome includes a Data Usability Assessment and Data Representativeness Evaluation pursuant to 310 CMR 40.1056.

7. Estimate the number of acres this RAO Statement applies to:

Massachusetts Department of Environmental Protection

I. RELATIONSHIP TO RELEASE OR THREAT OF RELEASE OF PERSON MAKING SUBMITTAL:

☒ 1. RP or PRP ☐ a. Owner ☐ b. Operator ☐ c. Generator ☐ d. Transporter

☒ e. Other RP or PRP Specify: **OTHER PRPS**

☐ 2. Fiduciary, Secured Lender or Municipality with Exempt Status (as defined by M.G.L. c. 21E, s. 2)

☐ 3. Agency or Public Utility on a Right of Way (as defined by M.G.L. c. 21E, s. 5(j))

☐ 4. Any Other Person Making Submittal Specify Relationship:

J. REQUIRED ATTACHMENT AND SUBMITTALS:

☐ 1. Check here if the Response Action(s) on which this opinion is based, if any, are (were) subject to any order(s), permit(s) and/or approval(s) issued by DEP or EPA. If the box is checked, you MUST attach a statement identifying the applicable provisions thereof.

☐ 2. Check here to certify that the Chief Municipal Officer and the Local Board of Health have been notified of the submittal of an RAO Statement that relies on the public way/rail right-of-way exemption from the requirements of an AUL.

☒ 3. Check here to certify that the Chief Municipal Officer and the Local Board of Health have been notified of the submittal of a RAO Statement with instructions on how to obtain a full copy of the report.

☒ 4. Check here to certify that documentation is attached specifying the location of the Site, or the location and boundaries of the Disposal Site subject to this RAO Statement. If submitting an RAO Statement for a PORTION of a Disposal Site, you must document the location and boundaries for both the portion subject to this submittal and, to the extent defined, the entire Disposal Site.

☒ 5. Check here to certify that, pursuant to 310 CMR 40.1406, notice was provided to the owner(s) of each property within the disposal site boundaries, or notice was not required because the disposal site boundaries are limited to property owned by the party conducting response actions. (check all that apply)

☒ a. Notice was provided prior to, or concurrent with the submittal of a Phase II Completion Statement to the Department.

☐ b. Notice was provided prior to, or concurrent with the submittal of this RAO Statement to the Department.

☐ c. Notice not required. d. Total number of property owners notified, if applicable: **112**

☐ 6. Check here if required to submit one or more AULs. You must submit an AUL Transmittal Form (BWSC113) and a copy of each implemented AUL related to this RAO Statement. Specify the type of AUL(s) below: (required for Class A-3, A-4, B-2, B-3 RAO Statements)

☐ a. Notice of Activity and Use Limitation

b. Number of Notices submitted:

☐ c. Grant of Environmental Restriction

d. Number of Grants submitted:

☐ 7. If an RAO Compliance Fee is required for any of the RTNs listed on this transmittal form, check here to certify that an RAO Compliance Fee was submitted to DEP, P. O. Box 4062, Boston, MA 02211.

☐ 8. Check here if any non-updatable information provided on this form is incorrect, e.g. Site Address/Location Aid. Send corrections to the DEP Regional Office.

☒ 9. Check here to certify that the LSP Opinion containing the material facts, data, and other information is attached.

Mayor Joseph A. Curtatone
Somerville City Hall
93 Highland Avenue
Somerville, MA 02143-1740

Dear Mayor Curtatone:

Re: Class B-1 Response Action Outcome Partial Statement
10 Franklin Avenue
Somerville, Massachusetts
RTN 3-23246

On behalf of UniFirst Corporation (UniFirst) of Wilmington, Massachusetts, GEI Consultants, Inc. is notifying your office that a Class B-1 Response Action Outcome Partial (RAO-P) Statement has been prepared for the portion of the 50 Tufts Street disposal site identified as 10 Franklin Avenue in Somerville, Massachusetts.

The conclusions of the Class B-1 RAO-P Statement include the following:

- Remedial actions were not conducted and a Permanent Solution has been achieved.
- A condition of No Significant Risk (NSR) to human health, safety, public welfare, and the environment exists for all receptors.
- An Activity and Use Limitation (AUL) is not required to maintain a condition of NSR.

The RAO-P has been submitted to the Massachusetts Department of Environmental Protection (MassDEP) Northeast Regional Office in Wilmington, Massachusetts for the above-reference Site. A copy of the report has been provided to Mr. Vithal Deshpande, Environmental Coordinator for the City of Somerville.

If you have any questions, please do not hesitate to contact me at 781-721-4012 or igladstone@geiconsultants.com.

Sincerely,

GEI CONSULTANTS, INC.
